SAMINCO SUPPLIES AC VFD BATTERY SYSTEM TO TIANDI, CHINA
The Battery System Passes Project Approval

Fort Myers, FL: Saminco supplied the AC VFD Battery System on the Battery Hauler project for the Chinese Coal Science and Industry Group Taiyuan Research Institute LLC (Tiandi). After much hard work by both Saminco and Tiandi, the project successfully passed the required approvals on 2 December 2016 and is now ready for customers.

Assembly and commissioning of the Battery Hauler was completed in November 2015, and live trials began in the Shenhua Shendong Hala Gou coal mine. The Saminco 240V DC/AC VFD Battery System was designed to be highly efficient with minimal maintenance required, and located in an explosion proof box. During the live trial, the Battery Hauler was tested in thin, medium and thick coal seams, and on various road surfaces of the mine. A superior battery life and lifting capacity were cited as part of the successful outcome.

Saminco is pleased to work with Tiandi on this successful project and looks forward to many more.
